

THE COMPLETE TOURER

Looking for a camper trailer that will take you anywhere in Australia and back again?

1 The DuraGal steel internal framework together with dual gas struts make the opening and set-up an easy one-person job

2 Dual heavy-duty recovery points at the rear of the trailer ensure you won't be stuck for long even if you do hit the hardest tracks

3 The fold-down staircase with walkway access to the queen-size bed gives an additional level of comfort and liveability to an already top of the line set-up

4 Four large internal drawers located in the walkway are perfect for the family's clothes, towels and linen. This negates the need for cumbersome luggage bags and suitcases

5 An unrivalled power set-up including 25A battery charger, CTEK 150W pure sinewave inverter, the ability to run off both 12V and 240V plus two 100Ah batteries ensure you will have all your power needs taken care of

6 Vehicle Components independent trailing arm suspension with coil and gas shocks provide excellent handling in all off-road situations

7 All dust and water seals are high-quality automotive pinch weld seals, ensuring the camper's compartments will stay clean and dry through every environment

8 A 90L internal water tank is plumbed both to the kitchen and outside tap via a 12V electric pump that operates as soon as you turn the tap. Being internally fitted means there is no chance of stone damage compared to the underslung variety

9 The kitchen is full stainless steel and includes a three-burner stove, large sink and lockable storage with enough space for all your pots, pans, plates and utensils

10 There is plenty of storage all around the trailer, including side compartments, front toolbox and the internal walkway with drawer system. All external compartments are key lockable for extra security

If you are one of the lucky few who are planning 'the big 4WD trip' around Australia this year, then the type of camper trailer you will tow is probably right at the top of your list together with vehicle choice. Having a trouble-free trip can usually be traced back to both preparation and the quality of your equipment.

Complete Campsite recognises this and has designed and built a range of camper trailers to suit the tough Australian conditions. Based on the NSW Central Coast, they are for many the pinnacle of a soft-floor design, renowned for their build quality and level of inclusions that set them far above their competitors.

Complete Campsite's latest model, the Uluru XT, comes complete with everything an adventurous family could want, including the ease of a one-person set-up, full stainless steel kitchen, 60L Engel fridge/

freezer, loads of storage, queen-size innerspring mattress and walkway bed access, as well as a full 12V power set-up that is the dream of most camper trailer owners everywhere.

With the new colour design and logo change, Complete Campsite is yet again moving ahead of the competition and signalling itself as the benchmark for soft-floor camper trailers. So, whether you are looking to trade up to a top of the line camper trailer before your next big trip or thinking about getting into the market for the first time, contact Grant and Jodie at Complete Campsite for the best information and advice.

With nearly 20 years experience in the industry, they will ensure you choose something that will suit your individual needs and enable you to get right around this great country in comfort and style. ■
